Abstract
This is a case of 42 years female presented with the complain of extreme dryness of soles and fingers of feet for 2 years. She also complained of burning on sides of fingers and toes, cracks on both the feet and intense itching. After systematic case taking followed by repertorisation of the totality by Synthesis Repertory using RADAR software in order to choose the individualised remedy.

Keywords: Psoriasis, plaque, pustular, guttate, sarsaparilla

Introduction
From clinical perspective, psoriasis can be seen as a wide spectrum of various skin manifestations at any given time, various forms can be present in an individual at the same time. All of the lesions have common characteristics, including erythema, thickening, and squamae. Although size of lesion can vary from a pinhead up to a diameter of 20 cm, borders of lesions are usually round, oval or polycyclic. Although it can affect any region, knees, elbows, lumbosacral region, scalp, and genital area are most frequently involved [1].

Psoriasis is clinically classified in 2 groups: pustular and non-pustular lesions
a. Non-pustular psoriasis
b. Psoriasis vulgaris (early and late onset)
c. Guttate psoriasis
d. Erythrodermic psoriasis
e. Palmoplantar psoriasis
f. Psoriatic arthritis (PsA)
g. Inverse psoriasis

Pustular psoriasis
a. Generalized pustular psoriasis (von Zumbush type)
b. Impetigo herpetiformis
c. Localized pustular psoriasis –
   1. Palmoplantar pustular psoriasis (Barber type)
   2. Acrodermatitis continua of Hallopeau [2].

Case History
Personal Details
Name: Mrs S
Sex: Female
Marital Status: Married
Dated: 20/12/2021

Presenting Complaints
The patient was having dryness and cracks on both the feet from 2 years. She was also facing burning on sides of fingers and toes; appearance of coppery colour eruptions, itching and all her skin complains get aggravate in spring season. She was also experiencing vertigo which is accompanied by sour eructation since 1 week.

Physical Generals
- Appetite: Increased
- Thirst: Thirsty
Desire: Salty  Aversion: Nothing Specific  Intolerance: Nothing Specific  Bowel: Unsatisfactory, regular, hard stool (D2N0)  Bladder: Clear, Profuse (D5N3-4)  Sleep: Refreshing  Perspiration: Profuse, non-staining, non-offensive

Mental Generals  • Melancholic3+  • Sensitive3+  • Depressed2+

Provisional Diagnosis: Plaque Psoriasis3

Totality of Symptoms  • Cracks in feet  • Cracks in fingers  • Burning in side of sole and fingers  • Dryness of extremities  • Coppery eruptions  • Vertigo with sour eructation  • Skin complains aggravate in spring

Rubrics Selected [4]

Analysis of the case
Analysis and evaluation of the case is done by selecting characteristics symptoms used to form the totality “cracks in feet and fingers, burning in sides of sole and finger, coppery eruption” were important particulars, “vertigo accompanied by sour eructation” was important physical general and “aggravation in spring” was important modality in this case. As the skin had a crusty appearance which is an important symptom of Sarsaparilla4, it was as the main medicine for prescription.

The remedy was selected on the basis of repertorisation from RADAR 10 software using Synthesis Repertory 9.1 by Frederick Schroyens [4] with repertorial result showing remedies as Sarsaparilla [5] (12/7), Lycopodium (14/6), Arsenic (12/6), Sulphur (12/5) and Rhus Toxicodendron (10/5).

Fig 1: Repertorial Analysis [4]

Prescription: Sarsaparilla [5] 30/7 doses

Basis for Prescription
Sarsaparilla is the best selected medicine as it covers all the rubrics selected with highest score the complaints get aggravated in each spring and in damp weather. The plaques had crusty appearance which is a characteristic of Sarsaparilla [5] skin. After analysing the results after repertorization and with the knowledge of Materia Medica, Sarsaparilla [4] 30 /3 doses were prescribed and patient showed marked improvement.

Follow – up

Discussion and Conclusion
Psoriasis is considered as an autoimmune disease where treatments are often needed throughout life. The quality of life of patients is often affected and comorbidities are common.

The conventional treatment for Psoriasis aims to stop skin cells from growing so quickly and to remove scales. Options include topical therapy (creams and ointments), phototherapy and oral or injected medication. There is no cure of Psoriasis as per the conventional treatment. They provide only symptomatic management via corticosteroids, vitamin D analogues, retinoids, salicylic acid, coal tar and anthralin. These treatment options have side effects such as skin irritation. Some of them are even contraindicated during pregnancy or while breastfeeding [7].

The homoeopathic medicine selected on the basis of homoeopathic principles is very much effective in this case of plaque psoriasis and shown remarkable results in the treatment. *Sarsaparilla* was selected on the basis of particulars and keeping in mind the knowledge of Materia Medica and homoeopathic philosophy. Treatment was continued for 6 months. Medicine was given in very few doses which appeared to be very effective in treatment of the case.
