Abstract

This paper discuss about the close relation between quantum physics and homoeopathic potentization. It is based on the science of atom and nucleus. In a quantum theory the atom gets appropriate energy and raised from its lower energy to higher energy state "The shifting of an atom from one energy state to another energy state is called Transition".

Potentization is the scientific process mainly based on Quantum Mechanism. Succussion is the one of the process of potentization during succussion (vigorous shaking) kinetic energy produced and with the help of photons the subatomic particles raised to higher energy level from its normal state.

Keywords: Quantum mechanism, potentization, succussion, spin electrons, atoms, molecules, electron volt, transition

Introduction

Subatomic Particles and Potentization

As you all know electron, proton, neutron are subatomic particle they have electric charge proton has positive and electron has negative charge., The atom raised from lowest energy to higher energy state it is known as *excited atom* during the potentization shaking of homoeopathy substance against a hard surface which produce kinetic energy which act as photon (pocket of energy)it increase the energy levels mostly homoeopathy is known as energy of medicine.

Quantum Energy

The potential energy of homoeopathic medicine is always mixed with alcohol is due to the potential energy released by the charge of an electron in fact there is always a natural unit of negative charge is present on an electron which is also equal but opposite in effect to the positive charge on the proton. This is known as nuclear charge If the natural potential charge of an electron increases the energy or the potency of the medicine is also increased.so it happened in the process of succussion. During the process of succussion there is a collision between the atoms of the medicine. When the atom gets excited the potential of medicine transits in to energy the electron have some amount of energy which is equal to 0.2Ev.so it increased in the number wise 1,2,3 in the process of succussion. During this process the electron in ground orbit gets excited and gets some potential energy in the same way the proton gets this forms an electromagnetic loops and these charge points having 'QUANTUM ENERGY'.

Methods

Quatum mechanism deals with electromagnetic field and spin electrons the preparation and the process of homoeopathic medicine by potentization is analyzed by quantum mechanism by scientific explanation of 'transition of energy'.

Discussion

The power of homoeopathy medicine is aroused after potentization. This can be explained scientifically with the help of Quantum physics.

Why succussion in hard surface?

In the process of potentization we should know about the production of electromagnetic fields due to the friction between the molecules of alcohol and glass surface.

Succession should be in hard surface and the prepared medicine should be closed tightly to prevent evaporation. (Medicines may also be prevented from high temperature and some external physical factors).

Why shouldn't we touch homoeopathic medicines by hand?

So the answer is here, touching them may reduce their efficacy by some unhygienic conditions. That's why the potentized medicine should be capped tightly and it must be stored away from radiations, strong odors, paint solvents, chemicals, and mainly the homoeopathic medicine should not be kept in refrigerators). Sometimes the spin electrons may also have connection with our material structure. The potency of the medicine is found equal to 0.2eV all laws state that homoeopathy is scientifically true and the power of medicine increased after potentization. Succession is the one of the processes of potentization during the process of succession the subatomic particles jump in to excited state. Shaking of homoeopathic medicine against a hard surface which produces kinetic energy which acts as a photon (pocket of energy) this will shift electrons from a lower energy state from a higher energy state in homoeopathic substance. It will increase the power of homoeopathic medicine. The concept that all forms of energy that are related in discrete units are called "quanta" and deals with matters. The quantum field theory is important to design to account for subatomic phenomena that also found in other branches of physics.

The principle of quantum mechanics

The principle of quantum mechanics with those relativity is an effort to describe the process of high energy collision in which the particles may be created. During a proton excited the positron gets rising from its point from the nucleus and falls back into nucleus. The electron in the ground orbit gets excited. So free electrons in ethanol (alcohol) may form an electromagnetic loop. That charge points hold quantum energy. In homoeopathy medicine to obtain higher spatial volume should be created. According to the law of homoeopathy cure is achieved in a sick body by the help of higher energy of homoeopathic medicine which flows ultimately in the lower energy level of sick cells. Energy of medicine flows in the form of free electrons. The energy of subatomic particles generated during succession. The charge of an electron is 0.2eV which can be generated more by continuing our succession up to our desired potency. So apart from physics everyone is asking how to administer homoeopathic medicine.

Why sublingual?

Why it is administered under the tongue? It is known as sublingual administration it absorbs the rapid absorption of the drug in to the systemic circulation. And coming in to the topic homoeopathic potentization provides the original particle state and the diluted substance holds more energy.

Conclusion

I propose the theory that quantum physics can help us to understand the theory of homoeopathic potentization. The electron and subatomic particles attain a higher state of energy during the process of succession (vigorous shaking). So this may increase the power of potentized substance.
